Frequency Inverter Parameters

The following curves show the fans operating with frequency control: The nominal frequency of the inverter is 87 Hz, i.e. the input frequency 400 V is increased to 87 Hz. The performance curves plot speed/frequency against volume and pressure, and the total efficiency ($\eta_{inverter} \times \eta_{motor} \times \eta_{impeller}$) is expressed as a parabola. The set up parameters for each inverter are provided in the accompanying literature.

Calculations formula

$P_S = p_{sF} \times q_V / \eta_{sS}$
 $L_{Wokt7} = L_{WA6/7} + L_{Wrel7}$
 $L_{Wokt6} = L_{WA6/7} + L_{Wrel6}$
 ③ = Stepless speed controllable via frequency converter
 * = No speed control available

Dimensions in mm, Subject to change.
